PERMANENT ADDRESS
4502 W Carol Ave, Glendale, AZ 85302

EDUCATION

University of Michigan – Master of Science in Software Engineering **Aug 2025 - Dec 2027**
University of Arizona – Bachelor of Science in Computer Science **Aug 2018 - May 2022**

TECHNICAL SKILLS

- Java, Python, NoSQL, SQL
- Apache Maven, Kafka, Camel
- Ignite, GridGain, Spark
- AWS, Docker, Heroku, S3
- Django, Spring, Spring Boot, React
- Log4j, Sumo Logic
- IntelliJ, PyCharm, VSCode
- GHA, Jenkins, CircleCi
- Git, Github, GitLab

EXPERIENCE

American Express, Phoenix, AZ ***Software Engineer*** **August 2022 – Present**

- Backend Software Engineer on Global Merchant Accelerated Settlements (GMAS) - Payment Modernization working on our in-memory computing payment engine.

- **2025** – **Direct Debit Payment Processing for Europe, Middle Eastern, and Africa Markets**. To collect for these market specific merchant bank accounts, the banks and merchants need to be notified a couple days/week in advance that we'll be collecting before we can proceed with our BAU Direct Debit Processing. I led the initial feature planning, designed user stories, SIT test cases, and aided with assigning stories to 3 new engineers and 2 new adjacent engineers, while also onboarding, going through daily build reviews, and teaching them the complexity of our payment engine.

- **2024** – **1099K Operational Risk Event**. For 1099k eligible payees, I designed and implemented a feature to prevent improper withholdings from global merchants, either certifying merchants based on a daily eligibility cache, or purging records that are in our pending system for longer than 4 years and 1 day. After the install in production, my code successfully certified/purged more than 8,000 pending payment records in our system after the first day.

- **2023** – **Multicurrency**. Modernized our current platform for global merchants to submit any currency in their payment files and either receive their total payable amounts in one currency or split it into multiple currencies.

Leidos, Tucson, AZ ***Full Stack Software Engineering Intern*** **May 2022 – August 2022**

- Focused on full stack development of user interfaces, restful services, APIs, database scripting, AWS Cloud Infrastructure, and integration of micro-services. Worked on developing features for tearline.mil, owned by the National Geospace Intelligence Agency and US Department of Defense.

University of Arizona, Tucson, AZ ***NASA Aspera Student Developer*** **May 2022 – August 2022**

- Aspera is a NASA astrophysics space mission to build, program, launch and operate a spacecraft in Low Earth Orbit to study gases around nearby galaxies. Guided by experienced Engineers and Scientists, I authored software, tests, requirements and documentation for actual flight and ground systems for use on the Aspera Mission.

University of Arizona, Tucson, AZ ***Computer Science Teaching Assistant*** **August 2021 – May 2022**

- Help new university students understand Computer Science concepts and algorithms (Arrays, Loops, Dictionaries, Trees).
- Offer Office Hours, Supplemental Instruction, teach students during class, and grade code for execution, runtime and efficiency.

Doma, San Francisco, CA ***Software Engineering Intern*** **June 2021 – August 2021**

- Worked as a backend software engineer Django on the Data-Services Team to help with pulling documents from third-party data vendors, sending them to S3 and then sending them to ResWare. Throughout my Summer I was able to Decrease T&E Time for all orders (thousands/day) by 1-2 minutes through Automation.

LEADERSHIP/ORGANIZATIONS

Society of Hispanic Professional Engineers (SHPE) **General Body** **September 2020 - Present**

- Host programs that are designed to raise awareness of and access to STEM among Hispanic communities.
- Directly serve K-12, undergraduate, and adult men, and women with experience with up-to-date technology.
